

Business Activity Monitoring

Cordys BOP 4.1 Fundamentals

CORDYS

BAM as part of the Closed-Loop Approach

RUN & MONITOR

Goal
<ul style="list-style-type: none">Collect process performance information, such as efficiency and effectiveness, for analysis and optimization
Roles
<ul style="list-style-type: none">AdministratorBusiness AnalystBusiness User  
Activities
<ul style="list-style-type: none">Get real-time process performance dataOperational business activity monitoring & KPI dashboardsAlerting of process inefficienciesManage service level agreements (SLAs)Perform trend analysis & bottleneck detectionPrepare for re-qualification and reanalysis

Allows you to analyze performance aspect of the business process and related enterprise application, visualize monitored data in dashboard, do real-time monitoring of critical business events, identify exceptions and address them at real-time

Business Activity Monitoring (BAM)

Technology that supports the aggregation, analysis, and presentation of real-time information about business processes inside organizations and involving customers and partners

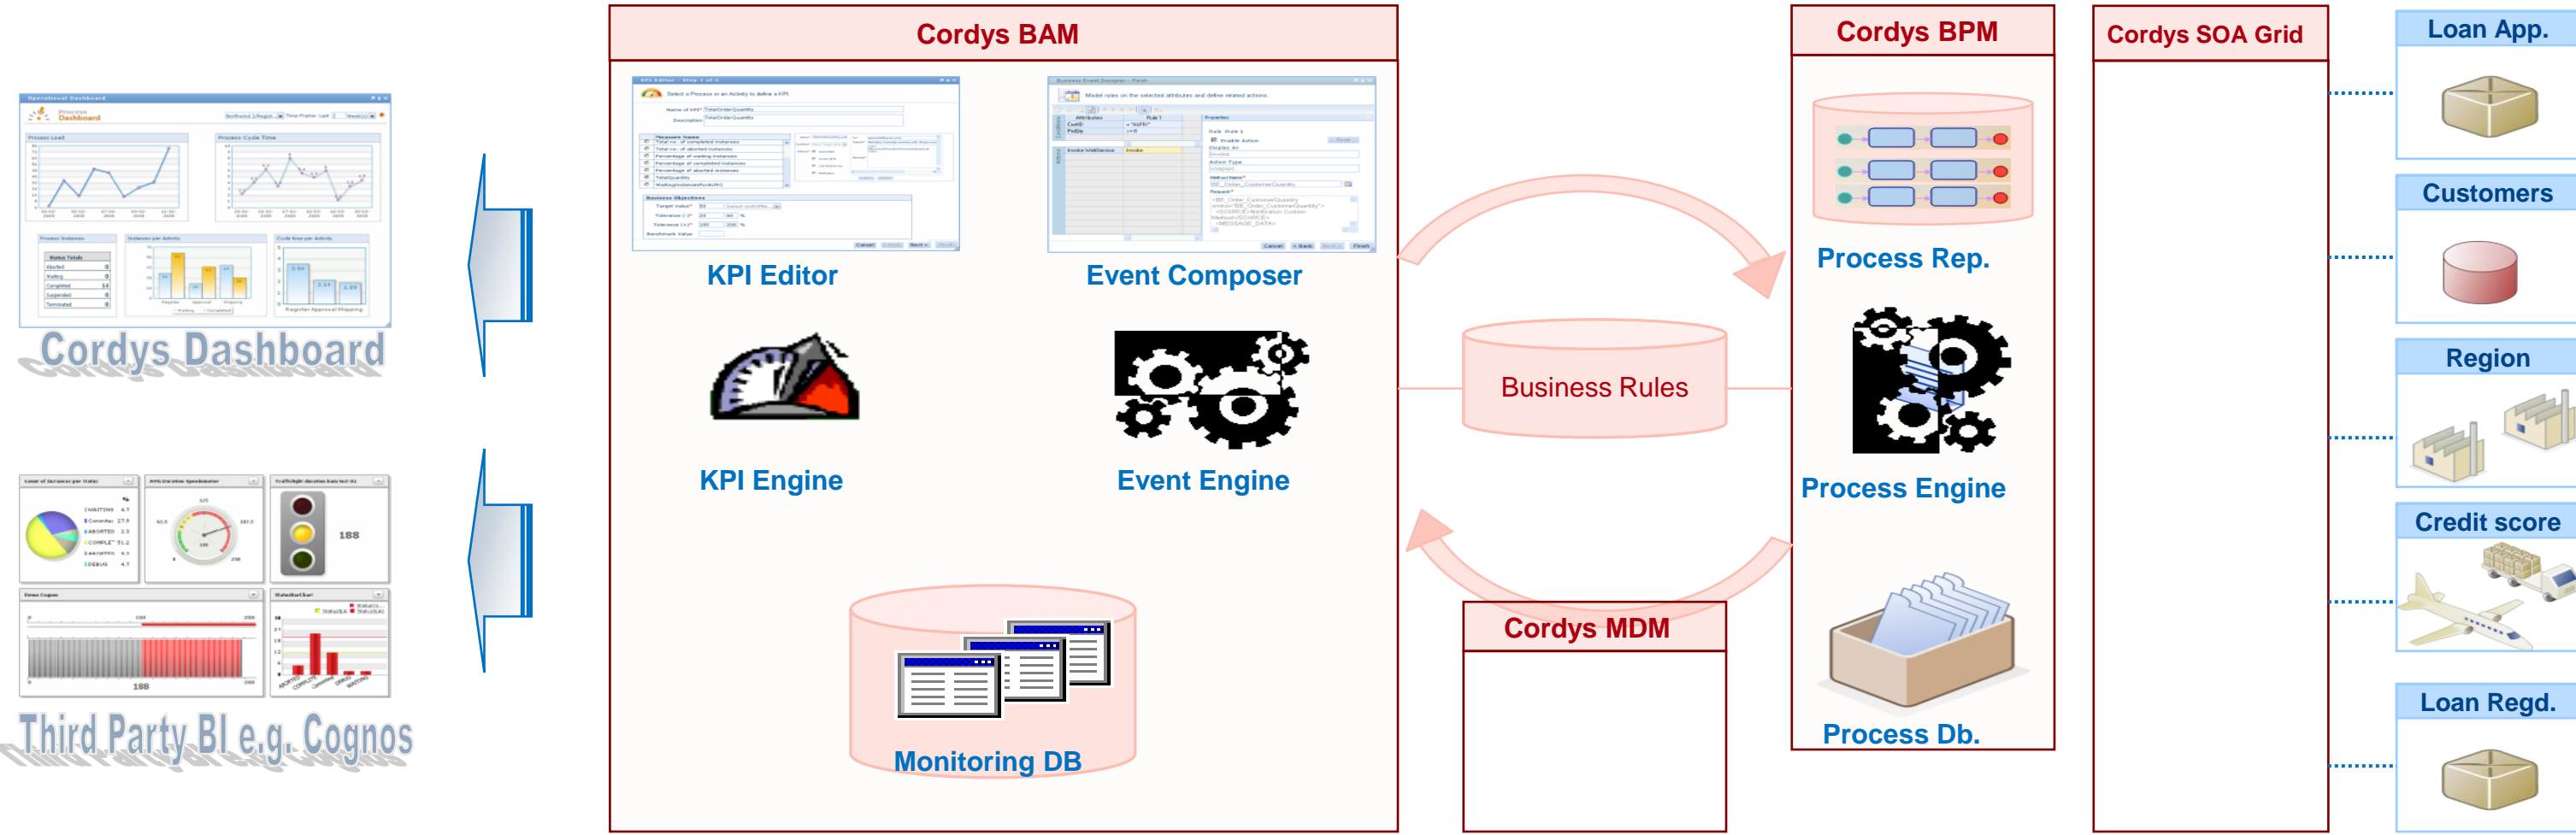

Business Intelligence (BI)

Technology that supports the aggregation, integration, analysis, and presentation of historical business information

About the difference between BAM and BI

“The most-visible difference between BI and BAM is the real-time nature of the data¹ .”

1) “Real-Time Retail Requires Business Activity Monitoring”, Gartner: 2007

Real Time View on Business: Personalized Dashboards

CORDYS

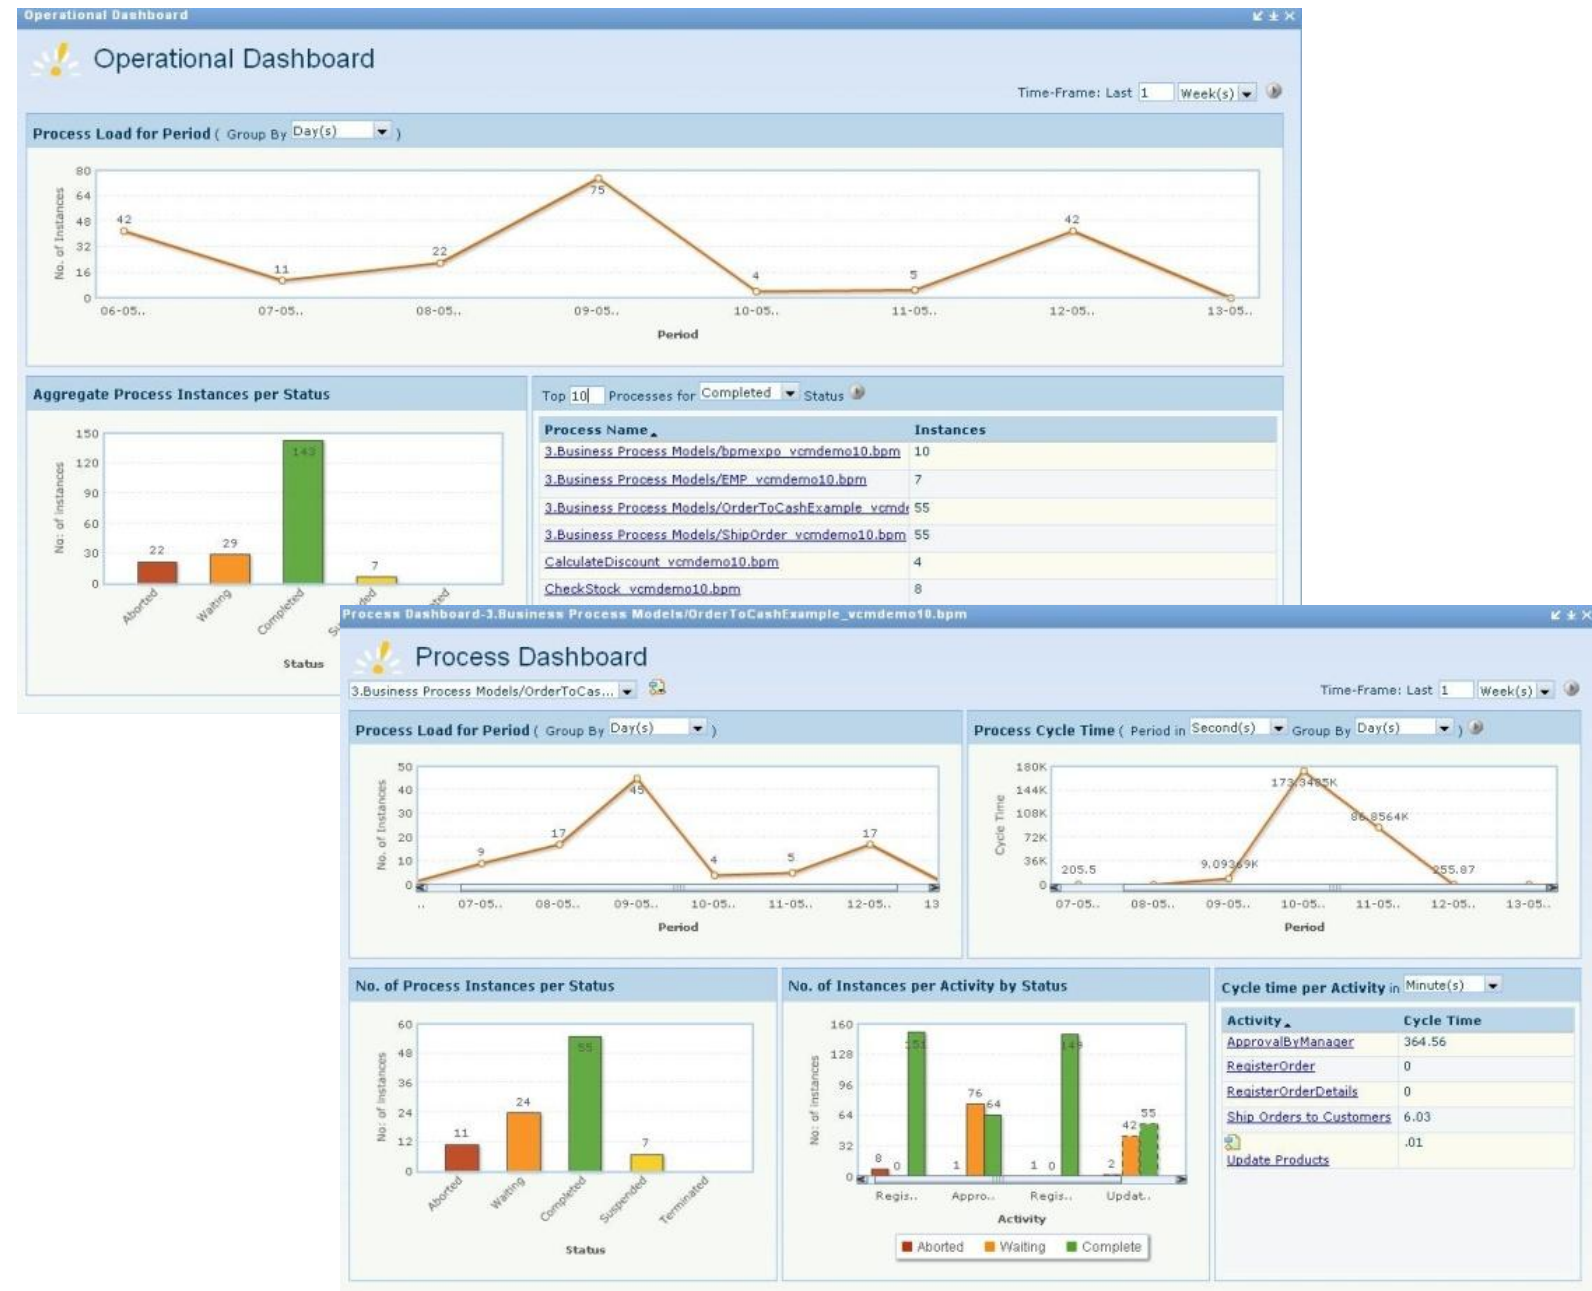

Real-time process performance monitoring

Features & Functions

- Near real-time process data
- Intuitive dashboard designer
- Monitor business process performance

Benefits

- Closed-loop process improvement
- Leverage historical data
- Make right-time decisions at right time

Analyze process performance within overall business context

Features & Functions

- Correlate process with business data
- Monitor important business measures

Benefits

- Incorporate context of KPIs
- Detailed monitoring
- Identify trends

- How many loan applications are rejected?
- How many claims await approval?
- What is this team's work load?

Discover process bottlenecks and inefficiencies

Features & Functions

- Change between levels of analysis
- Process instance dashboard
- Display process data in tables

Benefits

- Detect bottlenecks
- In-depth scans of process performance
- Detailed performance analysis

What happened within my business processes?

Real Time View on Business: Real-Time Notifications

CORDYS

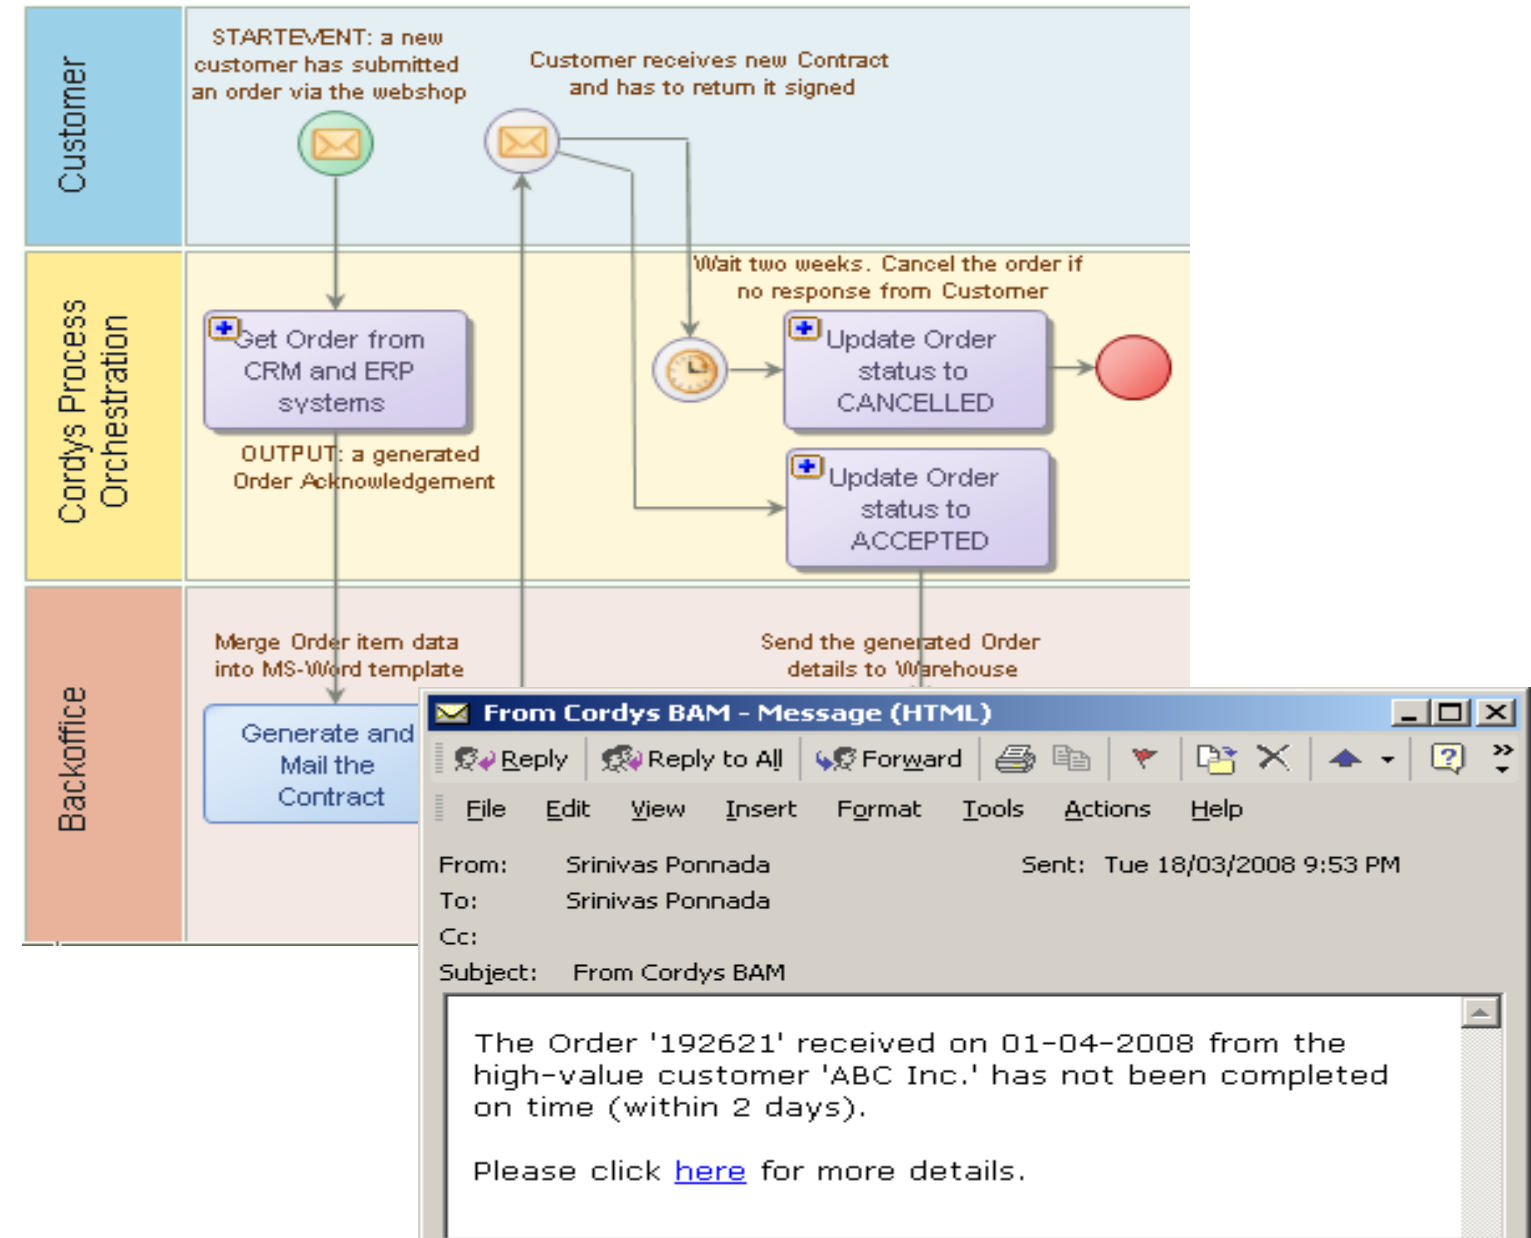

Take timely decisions and corrective actions

Features & Functions

- Receive alert in Cordys or user inbox
- Automatically start a business process
- Automatically start a web service

Benefits

- Proactively address eventual business process issues
- React to business opportunities instantly

KPI on Top of Process

CORDYS

KPI will automatically appear as child of process and can be dragged on user interface

Configure KPIs directly as part of process

Configure the color to visualize the different ranges

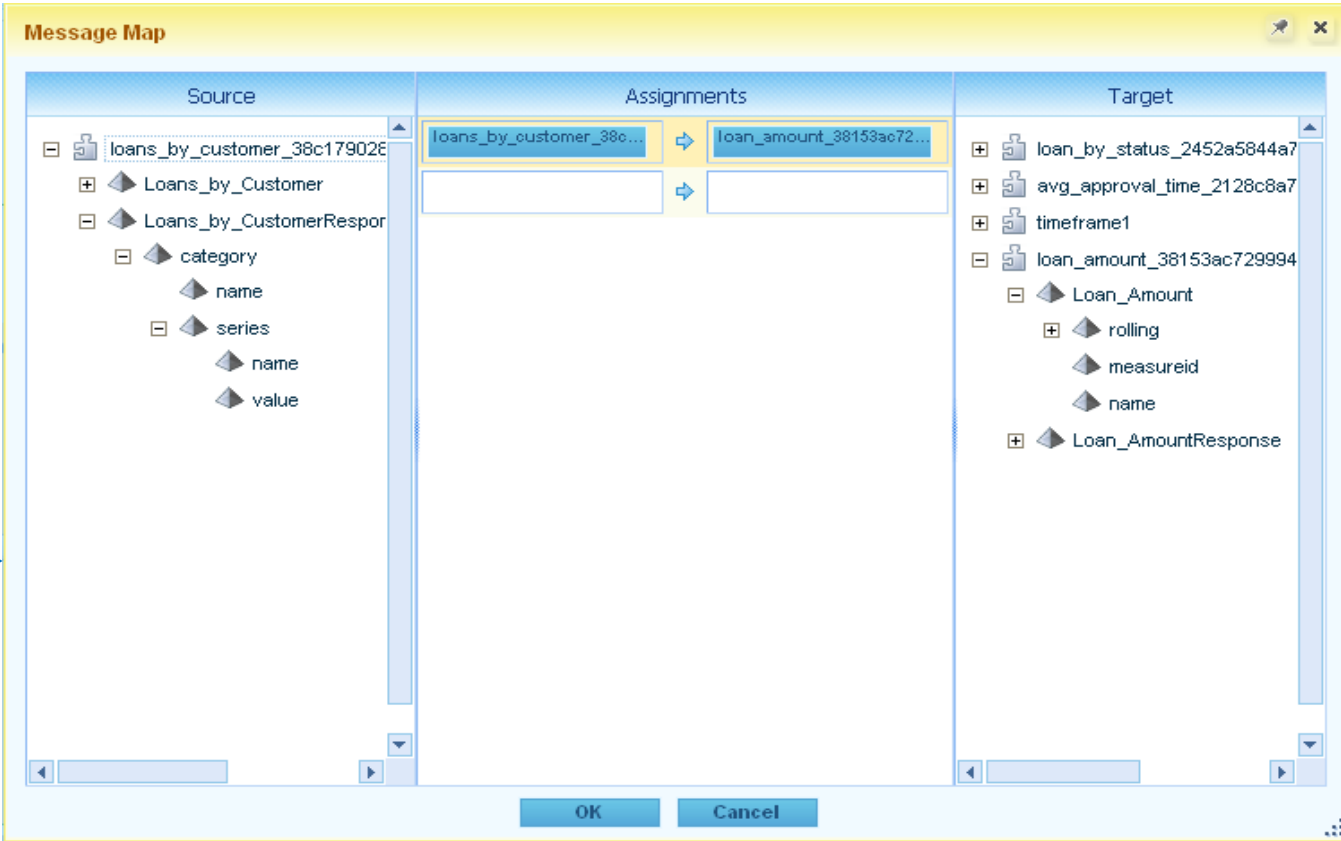

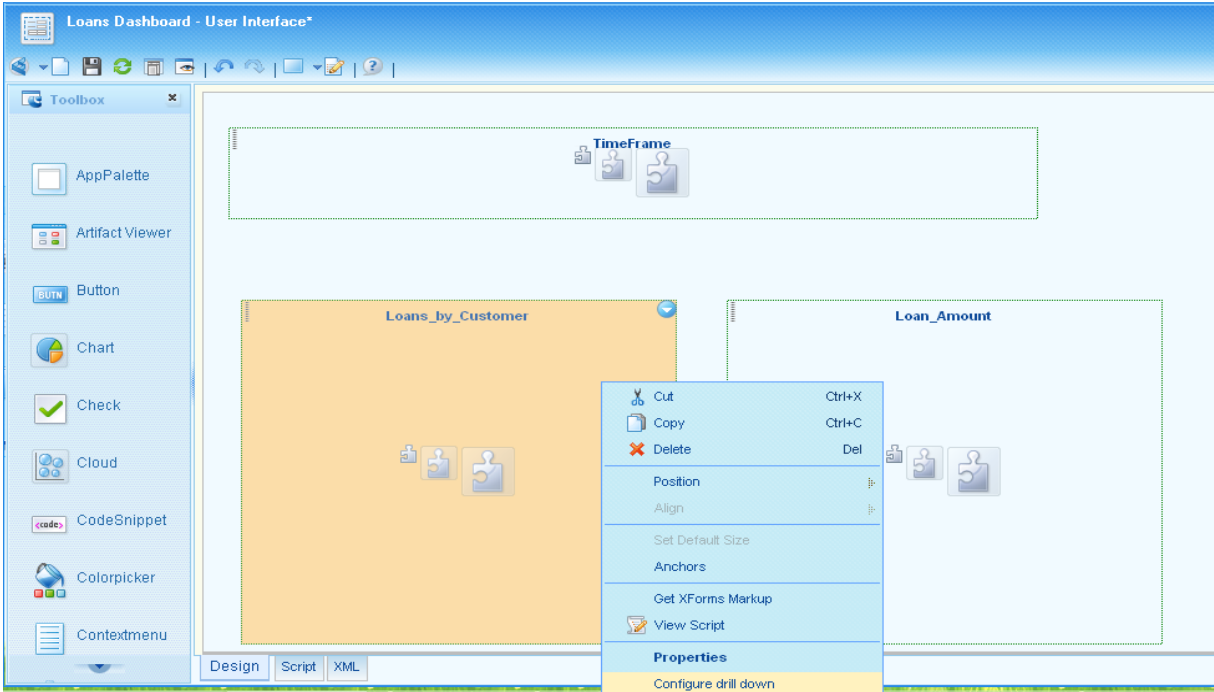

Drag KPI directly on user interface to show actuals and trend information

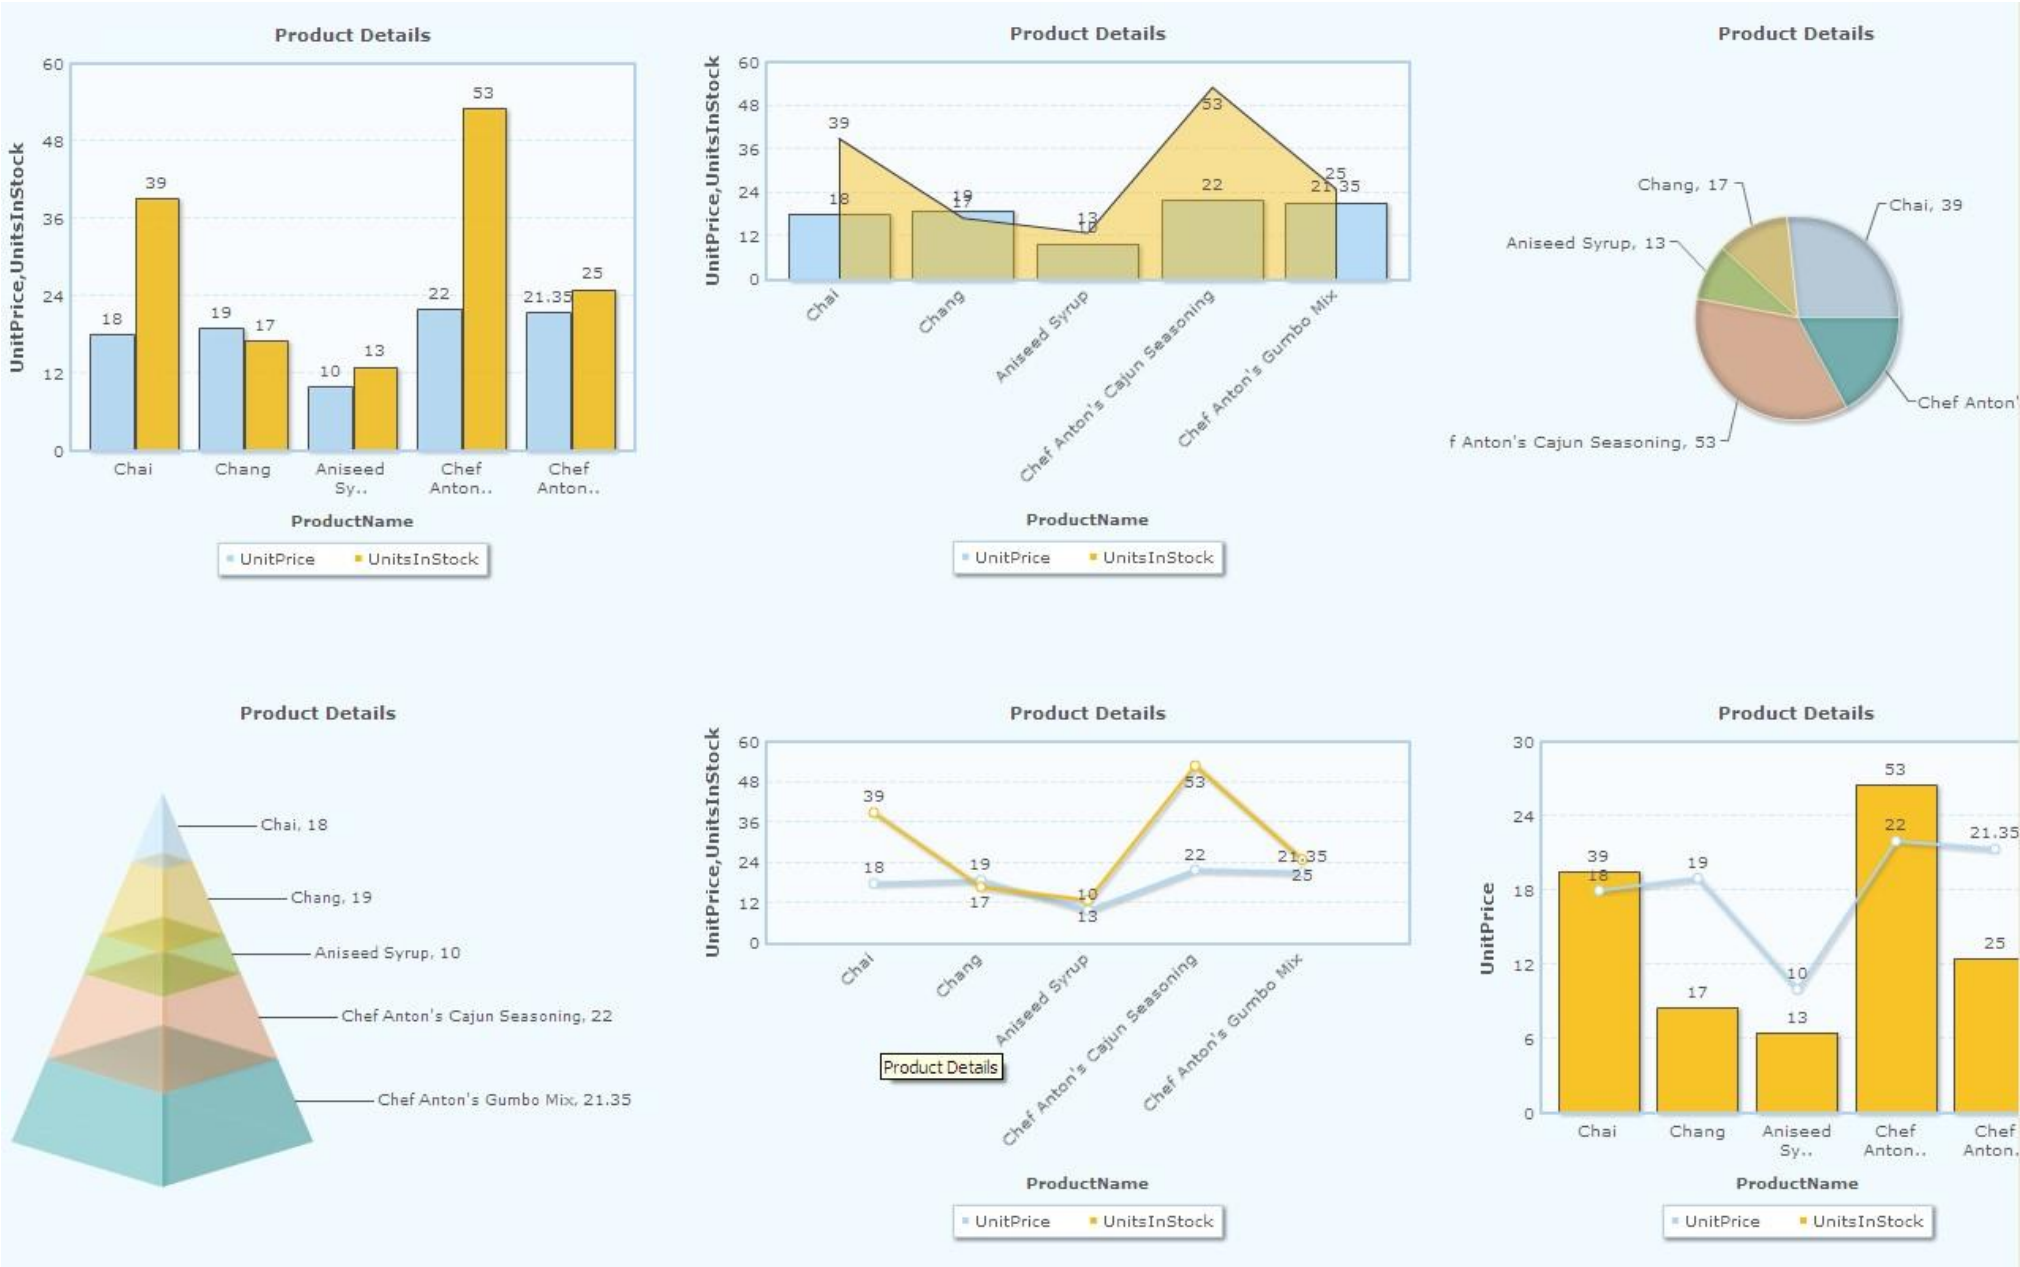

Customize the control and trending info

Range Name	Lower Limit	Upper Limit	Color
Low	0	80	
Normal	80	120	
High	120	200	

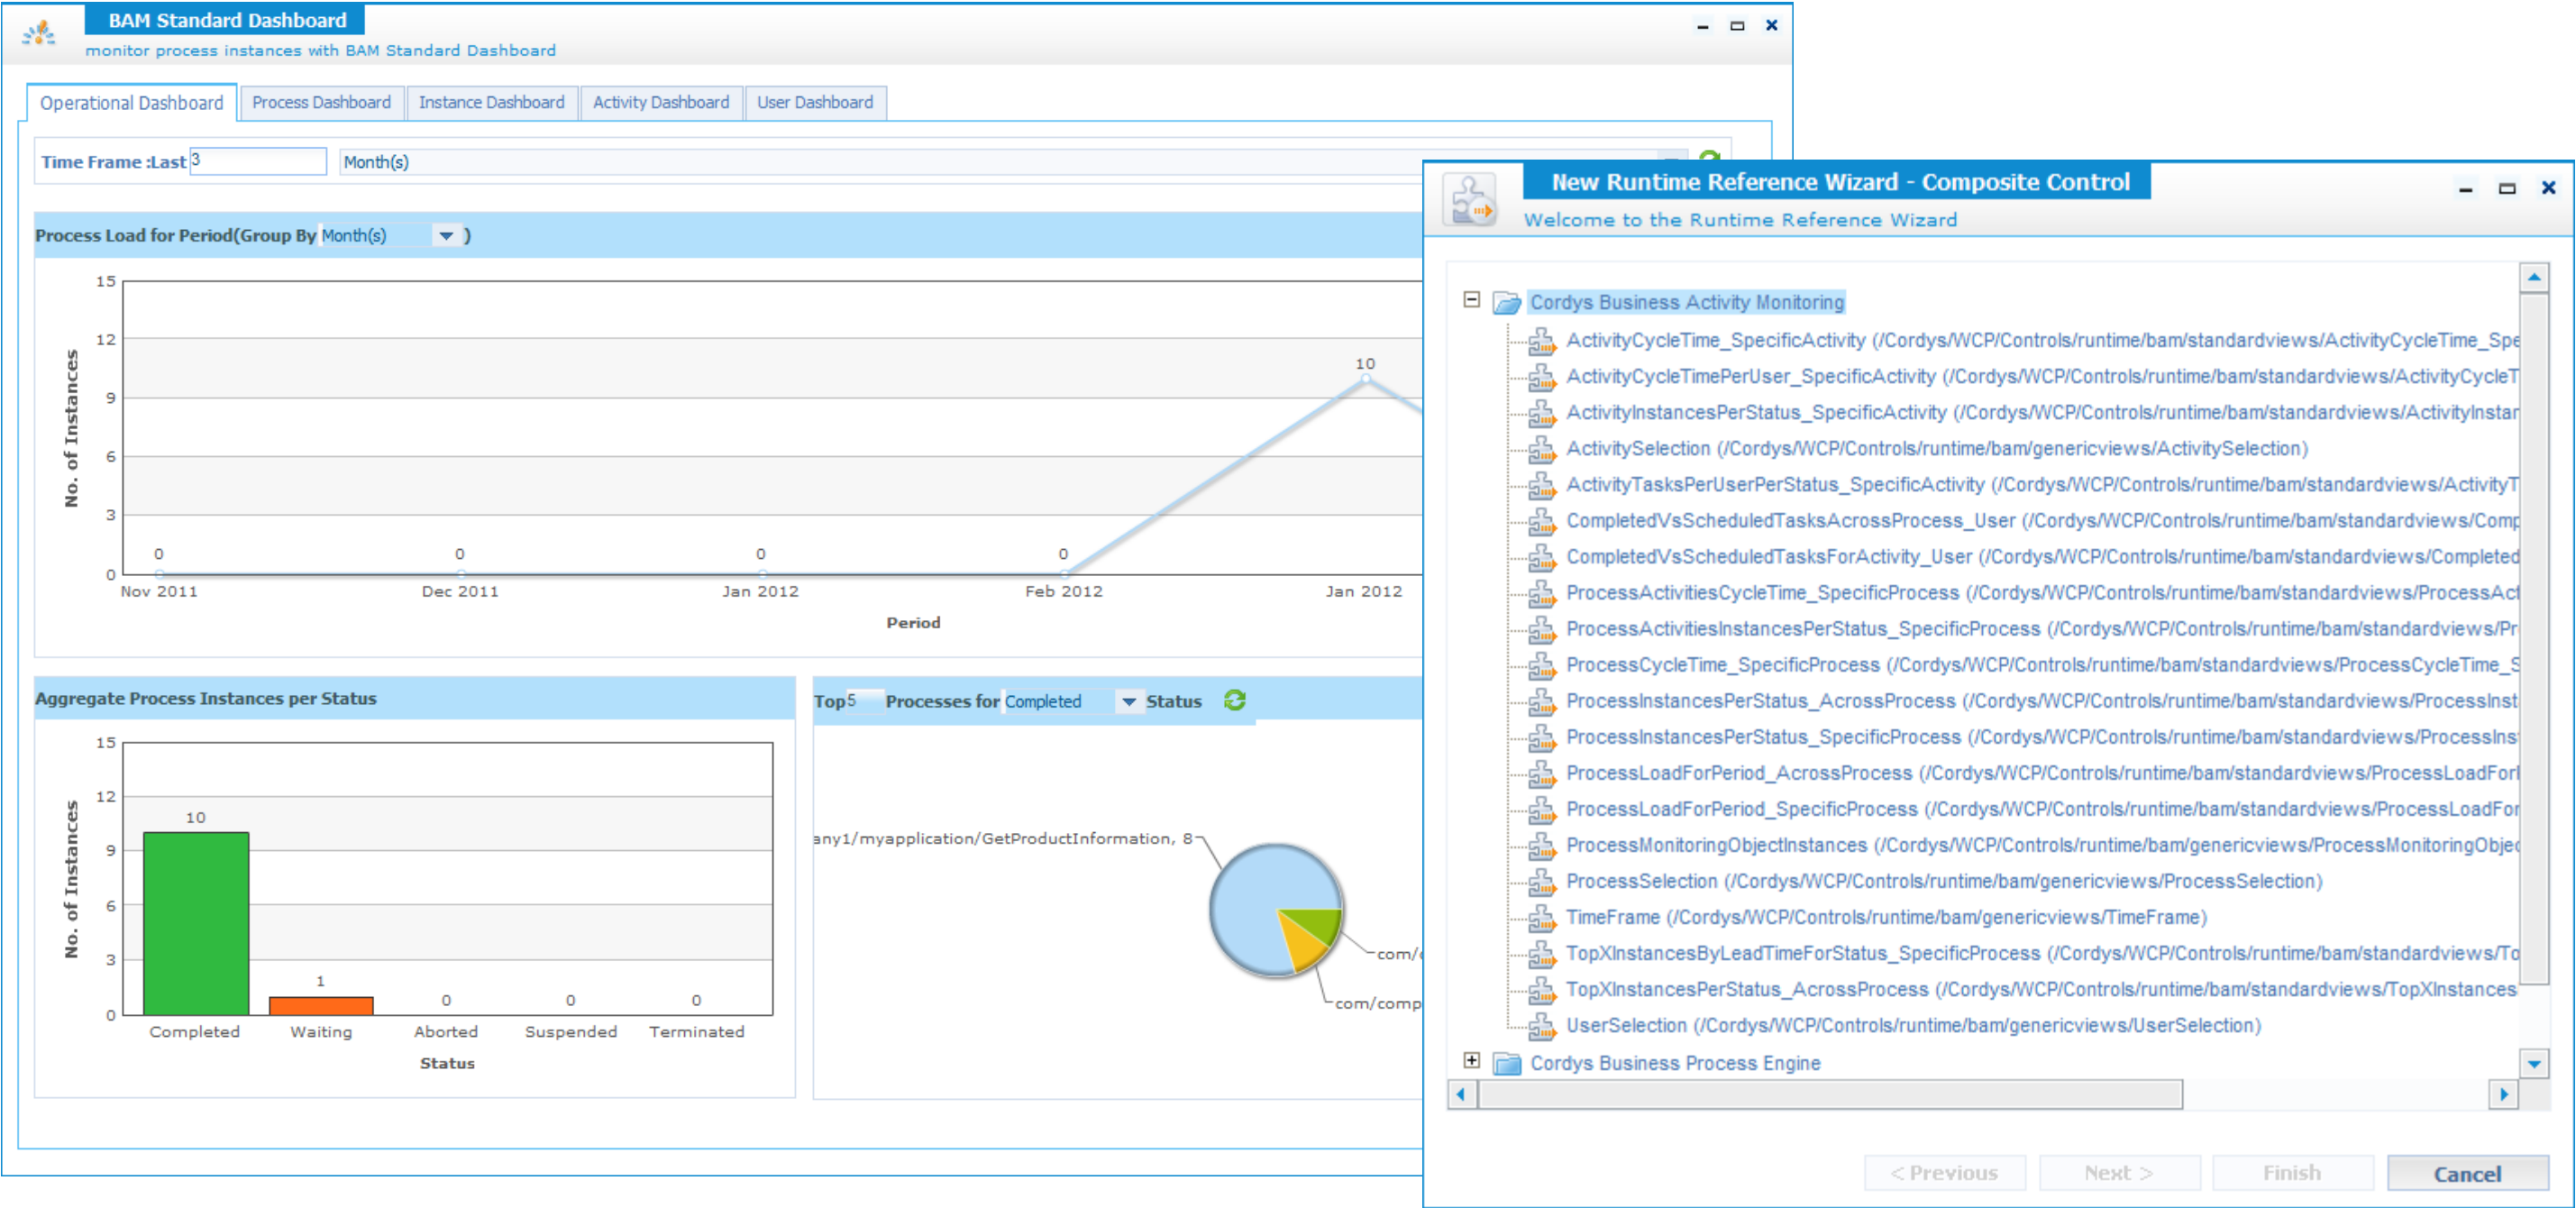

Start Time	End Time
12/00/2010 3:20:20 PM	1/13/2011 3:20:20 PM

Configuring Drill-downs
